Only the best in Bourne End Award winning company installs first Hydroxypure system

“You can see where the appeal lies; Hydroxypure is chlorine free, ideal for indoor pool installations and gives incredible water clarity. We are excited to see the results of this installation.”

says Ian Storr,
Director of Falcon Pools

50m³ indoor, in ground fully tiled concrete pool with an overflow wet edge.

Water surrounds the village of Bourne End in Buckinghamshire, United Kingdom. The original settlement sprung up on the banks of the River Thames and many homes, both old and new, still sit in this prime position, looking across to the town of Berkshire.

One such a home is owned by a local man, who, despite his home being encircled by water, commissioned award-winning UK-based builder Falcon Pools to construct a brand new indoor pool for his property.

For the modern, newly built home, award winning pool designer and builder Falcon Pools designed and installed a 50m³ indoor, in ground fully tiled concrete pool with an overflow wet edge.

“ I think people have wanted a completely chlorine-free alternative for their pools for a long time. Now Hydroxypure is filling that gap in the market and the level of demand for the product shows that. ”

says Tony Fisher,
managing director of Waterco Europe.

After having a chlorine sanitisation system in place at the pool at his previous property, the home's owner requested an alternative for his new pool.

“Falcon Pools discussed the possibilities with both Waterco and the pool owner and recommended Waterco's Hydroxypure system,” says Tony Fisher, managing director of Waterco Europe. “It's totally salt and chlorine free, odourless, free of taste and you don't need to shower after swimming. Hydroxypure uses the Peroxone Treatment Process, a combination of Perox, a proprietary blended form of hydrogen peroxide and hybrid ozone, which ensures your water environment is safe without the creation of harmful chemical by-products.”

Ian Storr, Director of Falcon Pools, says this is the first Hydroxypure system they have installed, and he anticipates demand for the product will boom in the UK.

“It's a very easy system to install and manage, which is great for us and for the pool owner,” he explains. “You can see where the appeal lies; Hydroxypure is chlorine free, ideal for indoor pool installations and gives incredible water clarity. We are excited to see the results of this installation.”

According to Tony, Hydroxypure has been making waves around the world since being launched as news of the benefits this system offers reaches more people.

“We have seen a massive increase in the amount interest from distributors and everyday pool owners alike,” he explains. “I think people have wanted a completely chlorine-free alternative for their pools for a long time. Now Hydroxypure is filling that gap in the market and the level of demand for the product shows that.”

In addition to the Hydroxypure system, Falcon Pools also fitted the pool with a Waterco multicyclone centrifugal filter and a Certkin 24" Vision filter complete with glass media.

So far so good it seems, the home's owner and his wife noting how “clear and nice looking” the water has been.

Waterco is now working with the UK based distributor Certkin International Ltd, who are able to provide full product support and training. They may be contacted in regard to the supply of the Hydroxypure system for the UK.
